

For Immediate Release:

Checco Services Inc. Awarded U.S. Patent for its bioChec™ Keystroke Biometrics Technology

March 24, 2009 – New York, USA – Checco Services Inc. has been awarded U.S. Patent No. 7,509,686 for its bioChec™ keystroke biometric technology. The technology includes the capability to identify or authenticate a person by their typing pattern. “The bioChec™ technology has an unlimited potential in multi-factor authentication,” states CEO John C. Checco. The technology is offered through a Software-as-a-Service hosted solution, and maintains compliance with the FFIEC guidance on multi-factor authentication for online banking.

“bioChec’s technology provides the ideal mix of risk versus cost, especially where this economy is dictating departments to do more with less,” says Checco.

A fully-functional demonstration of the technology is available at www.bioChec.com and the SDK is freely available for in-house non-commercial development.

About Checco Services Inc.

Checco Services Inc. is a privately held information security firm based in the NY Metro area. Established in 1993, Checco Services Inc. created the bioChec™ brand to market its biometric expertise.
